PROFILE SUMMARY

Final-year Computer Science student (B.Tech, 2027) at Vishwakarma University, Pune, focused on full-stack development and applied AI. Builds production-style web applications with React.js, Node.js, and Firebase, and has hands-on experience integrating large language models into working tools — including a multi-agent AI assistant and an AI-driven security scanner. Azure and AWS cloud-certified. Looking for a full-stack or AI/ML internship where I can ship real features fast and keep learning.

TECHNICAL SKILLS

Languages & Frameworks: JavaScript, Python, C, React.js, Node.js, Express.js, FastAPI, HTML, CSS

AI / LLM: Google Gemini SDK, Claude API, Prompt Engineering, AI Agent / Multi-Agent Development, LLM Orchestration, Retrieval-Augmented Generation (RAG)

Databases & Cloud: SQL, Firebase Firestore, Firebase Cloud Functions, Microsoft Azure, AWS

Security: JWT & bcrypt Authentication, Rate Limiting, SSL/TLS Validation, Security Header Auditing, SSRF Prevention

Tools: Git, GitHub, VS Code, Postman, npm, Power BI Desktop, RESTful APIs

PROJECTS

QuickBook — AI WhatsApp Booking Assistant

Node.js, Express.js, Google Gemini API, Twilio WhatsApp API

- Built an AI front-desk assistant for local businesses that understands natural customer messages and books appointments over WhatsApp, not just a generic chatbot demo.
- Designed a conversational flow that collects missing booking details (service, date, time, name) turn-by-turn before confirming, instead of failing on incomplete requests.
- Integrated Twilio's WhatsApp API via webhook so the same AI logic serves both a browser test client and real WhatsApp conversations with no duplicated code.
- Added automatic model fallback and retry handling so a temporary AI provider outage doesn't fail the booking flow.

Nexus AI Security Scanner

Python, FastAPI, Google Gemini SDK, httpx, BeautifulSoup4

- Built an AI-assisted web security auditing tool that pairs standard network diagnostics with Gemini-generated, context-aware vulnerability explanations and fix recommendations.
- Built an asynchronous FastAPI backend to run I/O-bound scans concurrently, checking SSL/TLS certificate validity and critical security headers (HSTS, CSP, X-Frame-Options).
- Built a pipeline that extracts page DOM and script content, then runs it through Gemini-driven heuristic analysis to turn raw HTML/JS into a structured, actionable security report.
- Resolved multi-layered dependency, pathing, and environment configuration issues to get the tool running reliably in production.

EDUCATION

B.Tech, Computer Science — Vishwakarma University, Pune 2024 – 2027

Class XII, State Board — Parbhani | 2023 | 67.83%

Class X, State Board — Latur | 2021 | 87.8%

CERTIFICATIONS & ACHIEVEMENTS

- Full Stack Software Developer Assessment — certified proficiency in end-to-end web development
- Certificate Program in Cloud Computing Engineering (Microsoft Azure / AWS)
- AWS Academy Graduate — Cloud Architecting
